

Nearby Vibes Additional Requirements

Subscription

I want to create a subscription module that allows venue owners to:

- Undertake a free 14 day trial.

- After 14 days they are downgraded to a Free Plan or prompted to upgrade to a premium plan.

The venue should receive prompts (push and email) throughout the 14 day lifecycle to upgrade

Alternatively a venue can access pricing and make a purchase through Pricing in the Footer.

Promo Code

To encourage sign up I want to be able to offer a promo code to qualifying NYC venues, 50% their first 12 month plan or X12 month to month subscriptions.

Free Trial

14 days

No credit card required.

Once an account is created for a venue the trial period is 14 days. No credit card is required to start.

Premium

\$39/month

Includes everything in the trial plus:

Analytics dashboard

QR scan analytics

Follower growth

Soft → Active conversion metrics

Post performance

Push notification analytics

Venue insights

Analytics become the reason to pay.

Promo Code

Offer a discount that's meaningful but doesn't devalue the product.

I'd recommend:

Monthly \$39/month

Annual \$390/year

That's equivalent to paying for 10 months and getting 2 free (about a 17% discount).
It's simple, easy to understand, and improves your cash flow.

As its an MVP, I want to be able to offer venues a promo code to get traction and to venues I want to qualify for the 50% subscription for 12 months either on the Premium Plan or x12 monthly subscriptions. This creates urgency without permanently discounting pricing.

To entice venues to sign up, on the subscription panel display:

'Founding Venue Program

Limited to the first 50 Manhattan venues.

Receive:

- 50% off for your first year
- Founding Venue badge
- Priority support
- Early access to new features
- Opportunity to influence the product roadmap'

Venues once a Premium subscription, monthly or yearly is selected are taken to a checkout, where a platform service fee is added covering the [Paddle.com](https://paddle.com) fees, which is 5% plus \$0.50 in USD. This total amount is then sent to Paddle for payment. On a successful purchase, activate the relevant subscription.

Prior to the end of a subscription notify the venue owner via push and email. If a venue has not upgraded by the end of subscription, downgrade their plan.

Admin Panel

These are the feature requirements as Admin I need:

Separate portal for login using a business email and password with an authenticator.
The web link should be different to standard login and not ideally discoverable by hackers. It should also be protected from Bot sign up and SPAM.

Ability to manage all Accounts including Users and Venues, with View, edit and delete

capabilities. I need the ability to delete a user or venues account.

I need the ability to View all venue Posts with the ability to view, edit and delete posts.

Ability to be notified when a new venue has created an account and completed all the onboarding tasks AND is a venue located within New York City USA.

Notification in a simple list and push notification when there is a report by a user of a legal or content matter for a venue profile or venue post. The notification should include a linked and the ability to view and be able to view/edit/delete the content in question

Social Media Creator - Invite to collaborate and access Venue Account

Venue social media is typically handled by a person other than the account holder, a junior member

I want the ability for a venue owner to issue via email an invite, like GitHub to a person.

The owner can designate what type of role it is for prior to sending the email.

Accounts can send one team member invite.

The two roles are:

Venue team member

OR

Social Content Creator

A venue owner can select a title for this seat.

Priviledges:

- a sub ordinate role can create an account using their details
- Create a post, edit posts they create.
- They are only able to delete posts they create
- They can access Dashboard analytics but only for their posts. They can view the venue overall performance and only posts they created.
